## Local Work Group Meeting

### Highest Priority

Long Term Protection of the Land: Land is fragile in our conservation district. Our goal is to keep it from being farmed and plowed. Thus, CRP is a vital aid. To keep the integrity of the grassland, water and fencing are key components.

### Critical Resource Concerns

#### Rangeland:

1. Source Water Depletion: Drought mitigation
2. Emergency grazing is necessary on CRP land.

#### Top Conservation Practices:

1. Water wells, pipeline, water facilities
2. Control wind erosion by maintaining cover
3. Rotational grazing: not overgrazing
4. Cross fencing
5. Exclusion acres

11

## Local Work Group Meeting

### Practices that did not work:

1. Guzzlers
2. Trees for wind breaks are difficult due to lack of water.

### Barriers that exist:

1. Lack of water
2. Drought
3. Shortage of well drillers
4. Expense of drilling

### New technologies:

1. Drone monitoring
